or strongly bound in cloth boards, price 15s. net.

EXAMPLES OF CLASSIC ORNAMENT FROM GREECE & ROME

Drawn from the Originals

By LEWIS VULLIAMY

Architect, Gold Medallist, and Travelling Student of the Royal Academy
(1790-1871)

A Series of Twenty Plates selected from the Original Published Work
with Introductory and Descriptive Notes

By R. PHENÉ SPIERS, F.S.A., F.R.I.B.A.

Author of "The Orders of Architecture," "Architecture East and West," &c.

THE plates included in this work are a selection from those which were published in 1825 by Lewis Vulliamy, the architect, on his return from the tour which he made through Greece, Asia Minor, and Italy, as Travelling Student of the Royal Academy. The volume in which they appeared was entitled *Examples of Ornamental Sculpture in Architecture, drawn from the Originals in the Years 1818-21*, long since out of print and now practically unobtainable. The plates display in their spirited execution an intimate appreciation of the refinement and vigour which characterizes the best work in Athens and Rome, and form an exceptionally fine series of illustrations of the choicest examples.

The acquisition of the original copper plates by the Publisher has afforded the opportunity of re-issuing a selection of the most interesting subjects at a price within the reach of most students. In making the selection the whole of the Greek examples, and a few of the more important of those in Rome and Italy, have been included, and it is believed the series will prove to be of great value to students, not only on account of the large scale to which the drawings are made, but because they include elaborate examples of Greek carving which are not to be found elsewhere. There is still some further interest attached to them, as in some cases they are the only representations known of antique fragments which have since disappeared, whilst in others the ninety years which have passed since they were drawn have led to their partial mutilation. The plates, which have been carefully printed from the original copper engravings, present all the sharpness and brilliancy of the first printings, and they are accompanied by short descriptive notes.

B. T. BATSFORD, Publisher, 94 High Holborn, LONDON.

*** For Specimen Illustration see pages 2 and 3 of this Prospectus.

*The upper part of a Stele of White Marble, formerly at Athens... which has since disappeared.
 4th the Size of the original.*

Large 8vo., handsomely bound in art linen gilt, price 18/- net.

THE ARCHITECTURE OF GREECE AND ROME

A Sketch of its Historic Development for the Use of Students and Others

By WILLIAM J. ANDERSON, A.R.I.B.A.

Author of "The Architecture of the Renaissance in Italy"

and R. PHENÉ SPIERS, F.S.A., F.R.I.B.A.

Containing 350 pages of text, and 250 Illustrations reproduced from photographs and drawings, including many full-page plates, of which 24 are finely printed in Collotype

IN this new edition the whole of the text has been very carefully revised and corrected by Mr. R. Phené Spiers, some portions have been rewritten, and various important additions have been made, among which may be mentioned:—

A description of the recently-discovered Palace at Knossos in Crete; a revised account of the Tomb of Agamemnon at Mycenae, together with new illustrations of the same, including a restoration of the entrance front; a series of Plans of all the principal Greek Temples, including a general plan of those at Selinus in Sicily; Plans of some of the Roman Temples, amongst which is one of those on the Acropolis at Baalbec; Lists of the principal historical events coeval with the periods dealt with; a chronological list of the best known Greek Temples, with their approximate dates, dimensions and other details; and two specially prepared Maps, one of Greece and Asia Minor, and the other of Italy, on which is indicated the position of all the chief buildings referred to in the work.

. The new matter in this edition represents a total of 52 pages of letterpress and 80 Illustrations distributed throughout the various chapters.

"As a comprehensive *résumé* of the history and characteristics of Greek and Roman architecture this must certainly be considered to be the best one-volume work of its kind that has yet appeared in our language, and one which should be interesting to educated readers generally, as well as to those who are in a special sense students of architecture."—THE BUILDER.

"It is such a work as many students of Architecture and the Classics have vainly yearned for, and lost precious years in supplying its place. As representing the architecture of Greece and Rome the illustrations possess incomparable interest, and the consideration of them alone, apart from the text, is an intellectual treat—not a single one can be found fault with as either careless or unworthy of its purpose."—THE ARCHITECT.

"A vivid and scholarly picture of Classic Art."—THE BRITISH ARCHITECT.

Imperial 4to., strongly bound in cloth gilt, price 10/6

THE ORDERS OF ARCHITECTURE: GREEK, ROMAN, AND ITALIAN

A Collection of typical examples from Normand's Parallels and other Authorities, with Notes on the Origin and Development of the Classic Orders and descriptions to the plates.

By R. PHENÉ SPIERS, F.S.A., F.R.I.B.A.

Fourth Edition, revised and enlarged, containing 27 Full-page Plates, 7 of which have been specially prepared for the work.

"A most useful work for architectural students, clearly setting forth in comparative form the various orders. Mr. Spiers gives recognised examples of the principal forms of capital and base, and of the finer and bolder profiles of entablatures, with their decorative complements. A good feature of the plates is the scale below each in English feet. Mr. Spiers's notes are also very appropriate and useful."—THE BRITISH ARCHITECT.

"A thoroughly practical work which cannot fail to be useful."—THE BUILDING NEWS.

"An indispensable possession to all students of architecture."—THE ARCHITECT.
